PLC-XW55

XGA Ultraportable Multimedia Projector

ULTRACOMPACT, FULLY PORTABLE 2000 AL XGA

Not much larger than a laptop PC, the PLC-XW55 weighs less than 6.4 pounds and delivers true XGA picture quality in a flexible go-anywhere system. Also, it may be ceiling or inverse mounted to meet numerous application needs.

SHORT THROUGH LENS WITH 1/2X to 16X DIGITAL ZOOM

Equipped with a short throw lens, PLC-XW55 can throw a crisp, bright 100-inch diagonal image from merely 11.0 feet away. The user can highlight important bullet points in Power Point presentations by zooming in with the 5/6X to 16X Digital Zoom.

AUTO SEARCH INPUT MODE

Aimed to reduce setup time, the Auto Input Search is a convenient function that detects various input signals and automatically selects the correct projection modes to display images from their original sources. The user no longer has to manually select input modes.

D-SUB15 INPUT AND MONITOR OUT

The PLC-XW55 offers excellent flexibility via D-Sub 15 input/output terminals. Using an optional adapter cable, the D-Sub 15 input can even accept component video signals. The D-Sub 15 output terminal can be used with monitor output for greater flexibility.

BLACKBOARD (GREEN) MODE

For more effective presentations in rooms with dark-surfaced walls, the PLC-XW55 projector features the blackboard (green) mode, which automatically adjusts white balance and gamma correction to project an intelligent image without a screen.

SECURITY FEATURES

A four-digit PIN code lock ensures projector security. The PLC-XW55 projector cannot be operated without the correct password.

QUICK START AND POWER-OFF AND GO

No more waiting for the projector to cool down. Simply disconnect the power cord right after the presentation, without worrying about overheating.

USER-SPECIFIED START-UP SCREEN

To create a more professional presentation, logo and image files may be captured for display during the projector's start-up countdown sequence.

VARIABLE AUDIO OUT

This convenient feature on the PLC-XW55 allows the user to control the audio level right from the projector. This centralization of video and audio controls helps in educational applications by ensuring the technical quality of the presentation and eliminating the fuss of separate outside audio controls.
